Natural Disaster in Malaysia

Facts:

1. 76 disaster recorded in the period of 1965-2016
2. Type of disaster - wildfire, storm, landslide, mudflows, floods, epidemic, tsunami & drought
3. More than half of the disaster were floods hazard (45)

UN World Conference on Disaster Risk Reduction 2015 Sendai Japan

Priorities for Action

Focused action within and across sectors by States at local, national, regional and global levels

Priority Action 1 Understanding disaster risk	Priority Action 2 Strengthening disaster risk reduction for resilience	Priority Action 3 Investing in disaster risk reduction for resilience	Priority Action 4 Enhancing disaster preparedness for effective response, and to “Build Back Better” in recovery, rehabilitation and reconstruction
---	--	---	---

Roles of Stakeholders

Civil society, volunteers, organized voluntary work organizations and community-based organizations to participate (In particular, women, children and youth, persons with disabilities, and older persons)	Academia, scientific and research entities and networks to collaborate	Business, professional associations and private sector financial institutions to collaborate	Media to take a role in contributing to the public awareness raising
---	--	--	--

Global Targets <ul style="list-style-type: none">⊖ The number of deaths⊖ The number of affected people⊗ Economic loss④ Damage to medical and educational facilities⑤ National and local strategies⑥ Support to developing countries⑦ Access to early warning information

- Seven concrete global targets were specified
- The targets include important policy focuses, such as **mainstreaming DRR**, prior investment, “Build Back Better”, multi-stakeholders’ involvement, people-centered approach, and women’s leadership

Big Data Analytics – Initiative by the Government

14 November 2013

The Prime Minister has announced the Big Data Analytics initiatives in Malaysia while chairing the 25th MSC Malaysia Implementation Council Meeting (ICM) to address the current challenges through the use of BDA technology. MAMPU has been appointed as BDA project leader for the Public Sector.

19 November 2014

Flagship Application Coordination Committee (FCC) Meeting agreed of the need to develop expertise and BDA Centre of Excellence

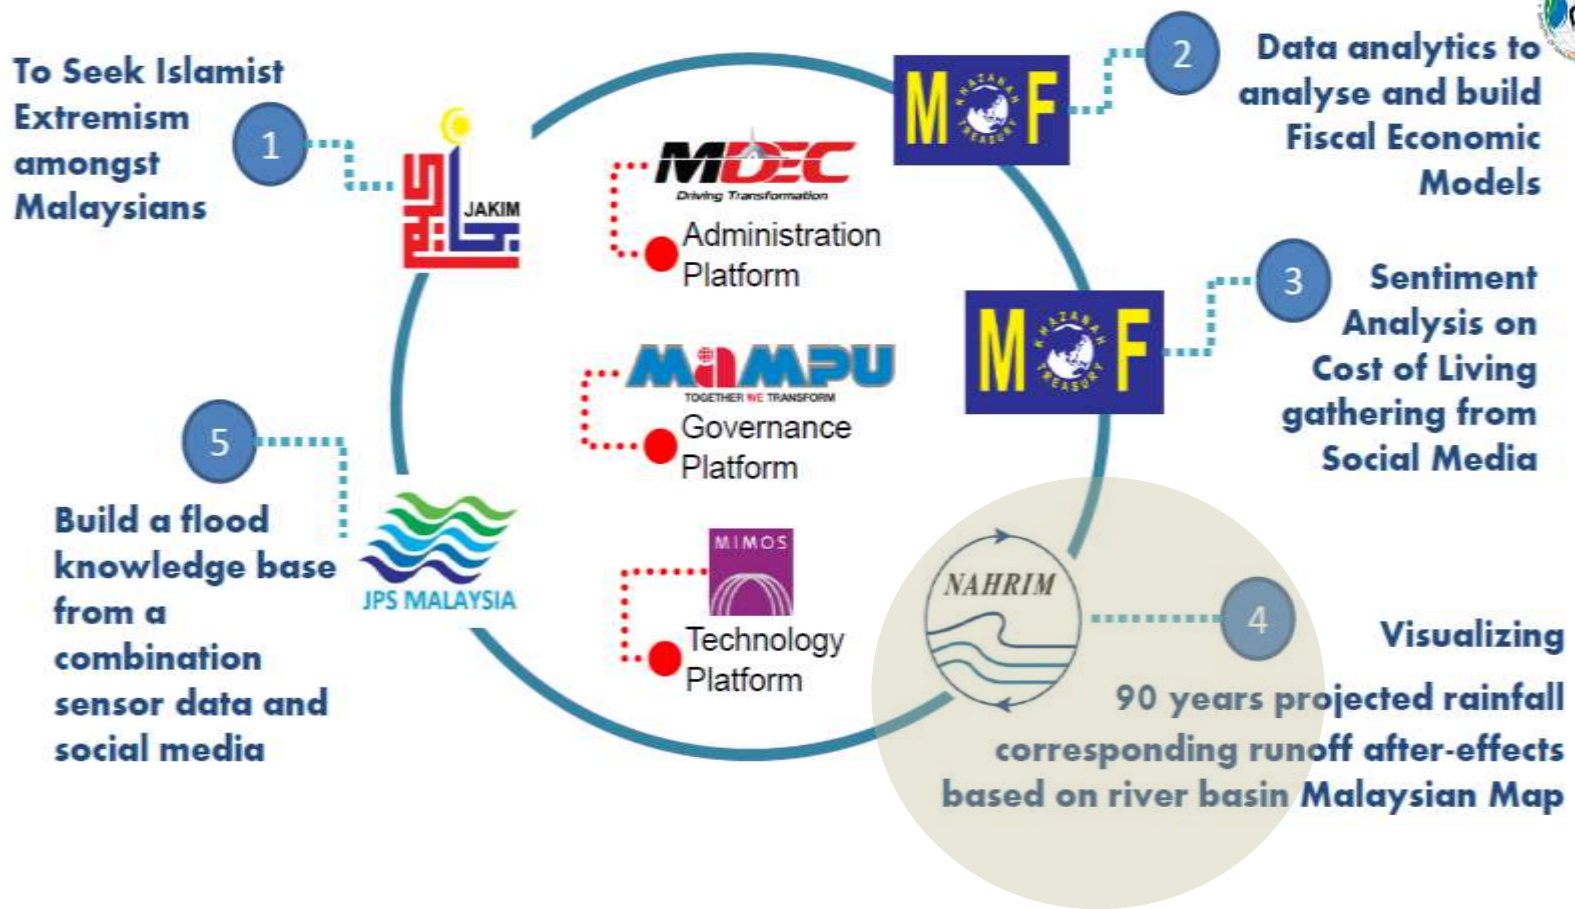

25 January 2015

MAMPU, MDEC and MIMOS signed a MOU implement a strategic collaborative work through BDA-Digital Government Open Innovation Network (BDA-DGOIN)

23 April 2015

MAMPU-MDEC-MIMOS launched the BDA-DGL. Four (4) government agencies participating in Proof-of-Concept BDA initiatives were recognized

Project Objective

To develop a **BDA related system** that will be able to assist NAHRIM in **visualizing and analyzing** almost **1450 simulation-years** of grid-based projected hydro-climate data for Peninsular Malaysia

Studies & Reports

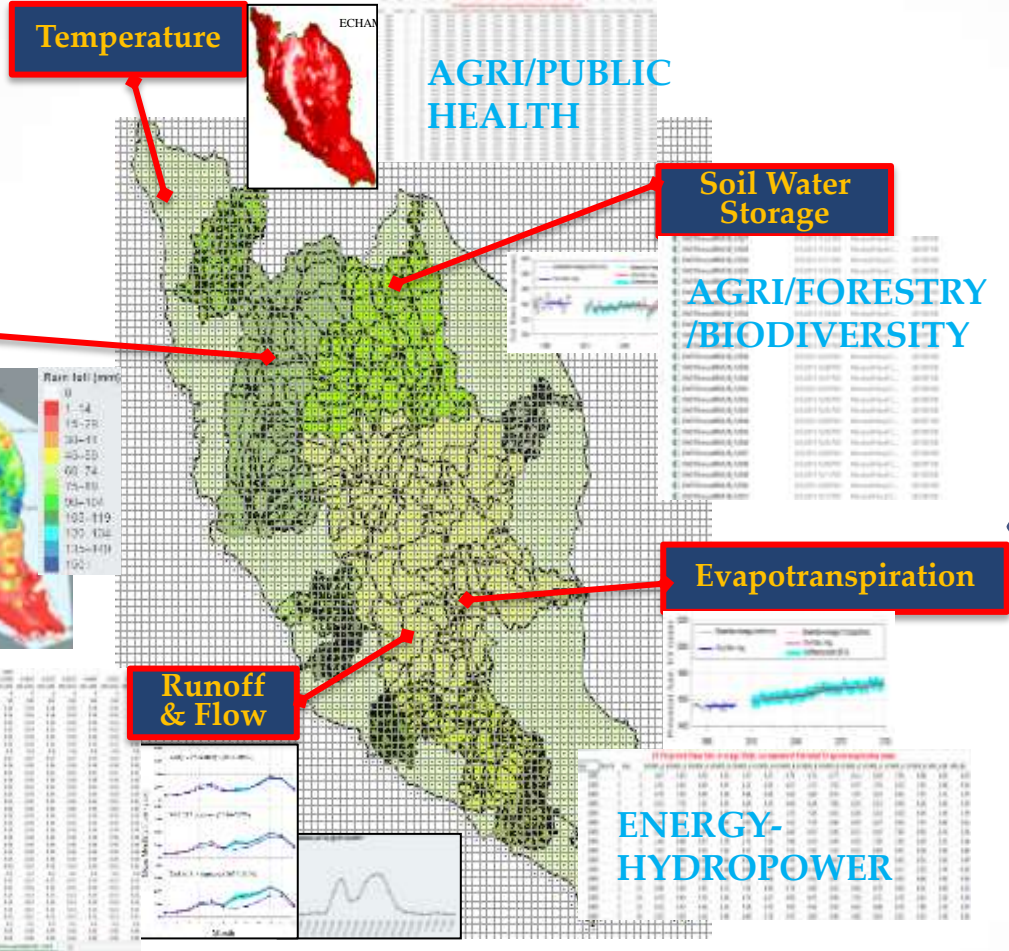

- Climate change impact on the hydrologic regime and water resources for Peninsular Malaysia (NAHRIM, 2006)
- Climate change impact on the hydrologic regimes, water resources and landuse for Sabah & Sarawak (NAHRIM, 2010)
- Study of the impact of climate change on sea level rise at Peninsular Malaysia and Sabah & Sarawak (NAHRIM, 2010)
- **Climate change impact on the hydrologic regime and water resources for Peninsular Malaysia (NAHRIM, 2014)**

PROJECTED HYDROCLIMATE DATA ANALYSIS & VISUALISATION FOR POTENTIAL DROUGHT & FLOOD EVENTS IN PENINSULAR MALAYSIA

Big Data Analytics POC with NAHRIM

Projected Hydro-climate Data Analysis and Visualization for Potential Drought and Flood Events in Peninsular Malaysia

The scope of this POC is to develop a system that will be able to assist NAHRIM in visualizing 90 years of projected data of rainfall and the corresponding runoff after-effects based on the river basin map for Peninsular Malaysia. The system is also able to display streamflow station data compared with historical threshold and the corresponding runoff and rainfall data.
