Presentation Outline

Limitations of SDIs

Transformative Characteristics

Explain methodologies – case study

SKI Architecture and Framework

The On-demand Generation

SIRI has limitations

Problem lies with how
we organise our data

On-Demand Limitations – The Query

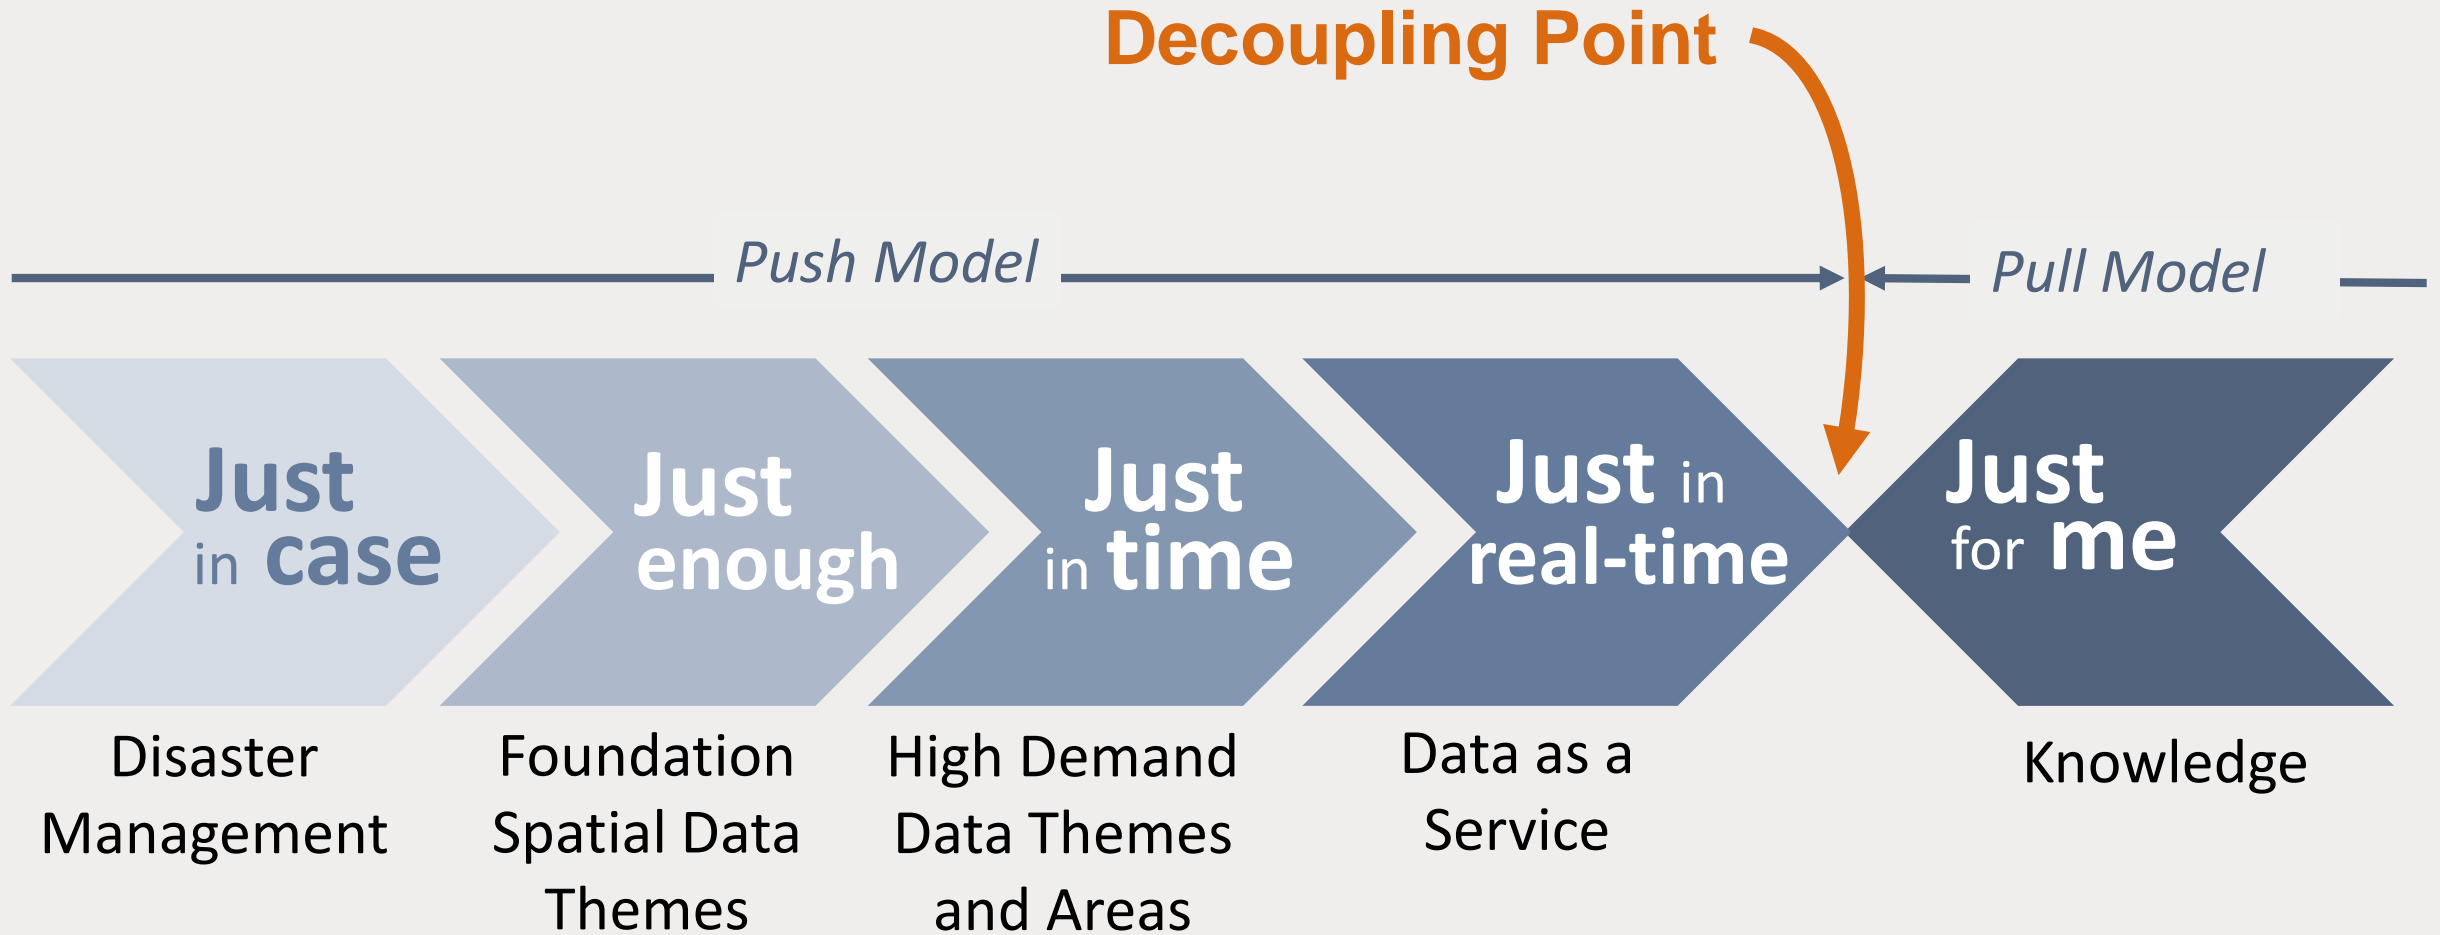

The background of the slide is a grayscale image of a smartphone screen. The screen displays the time "4:42 PM" at the top, a signal strength indicator on the left, and the text "Go ahead, I'm listening..." in a large, white, sans-serif font. Overlaid on this background are three green rectangular boxes containing text.

Questions are multifaceted

Answers are context dependent

Unable to be predicted

Limitations - Forecasting Demand

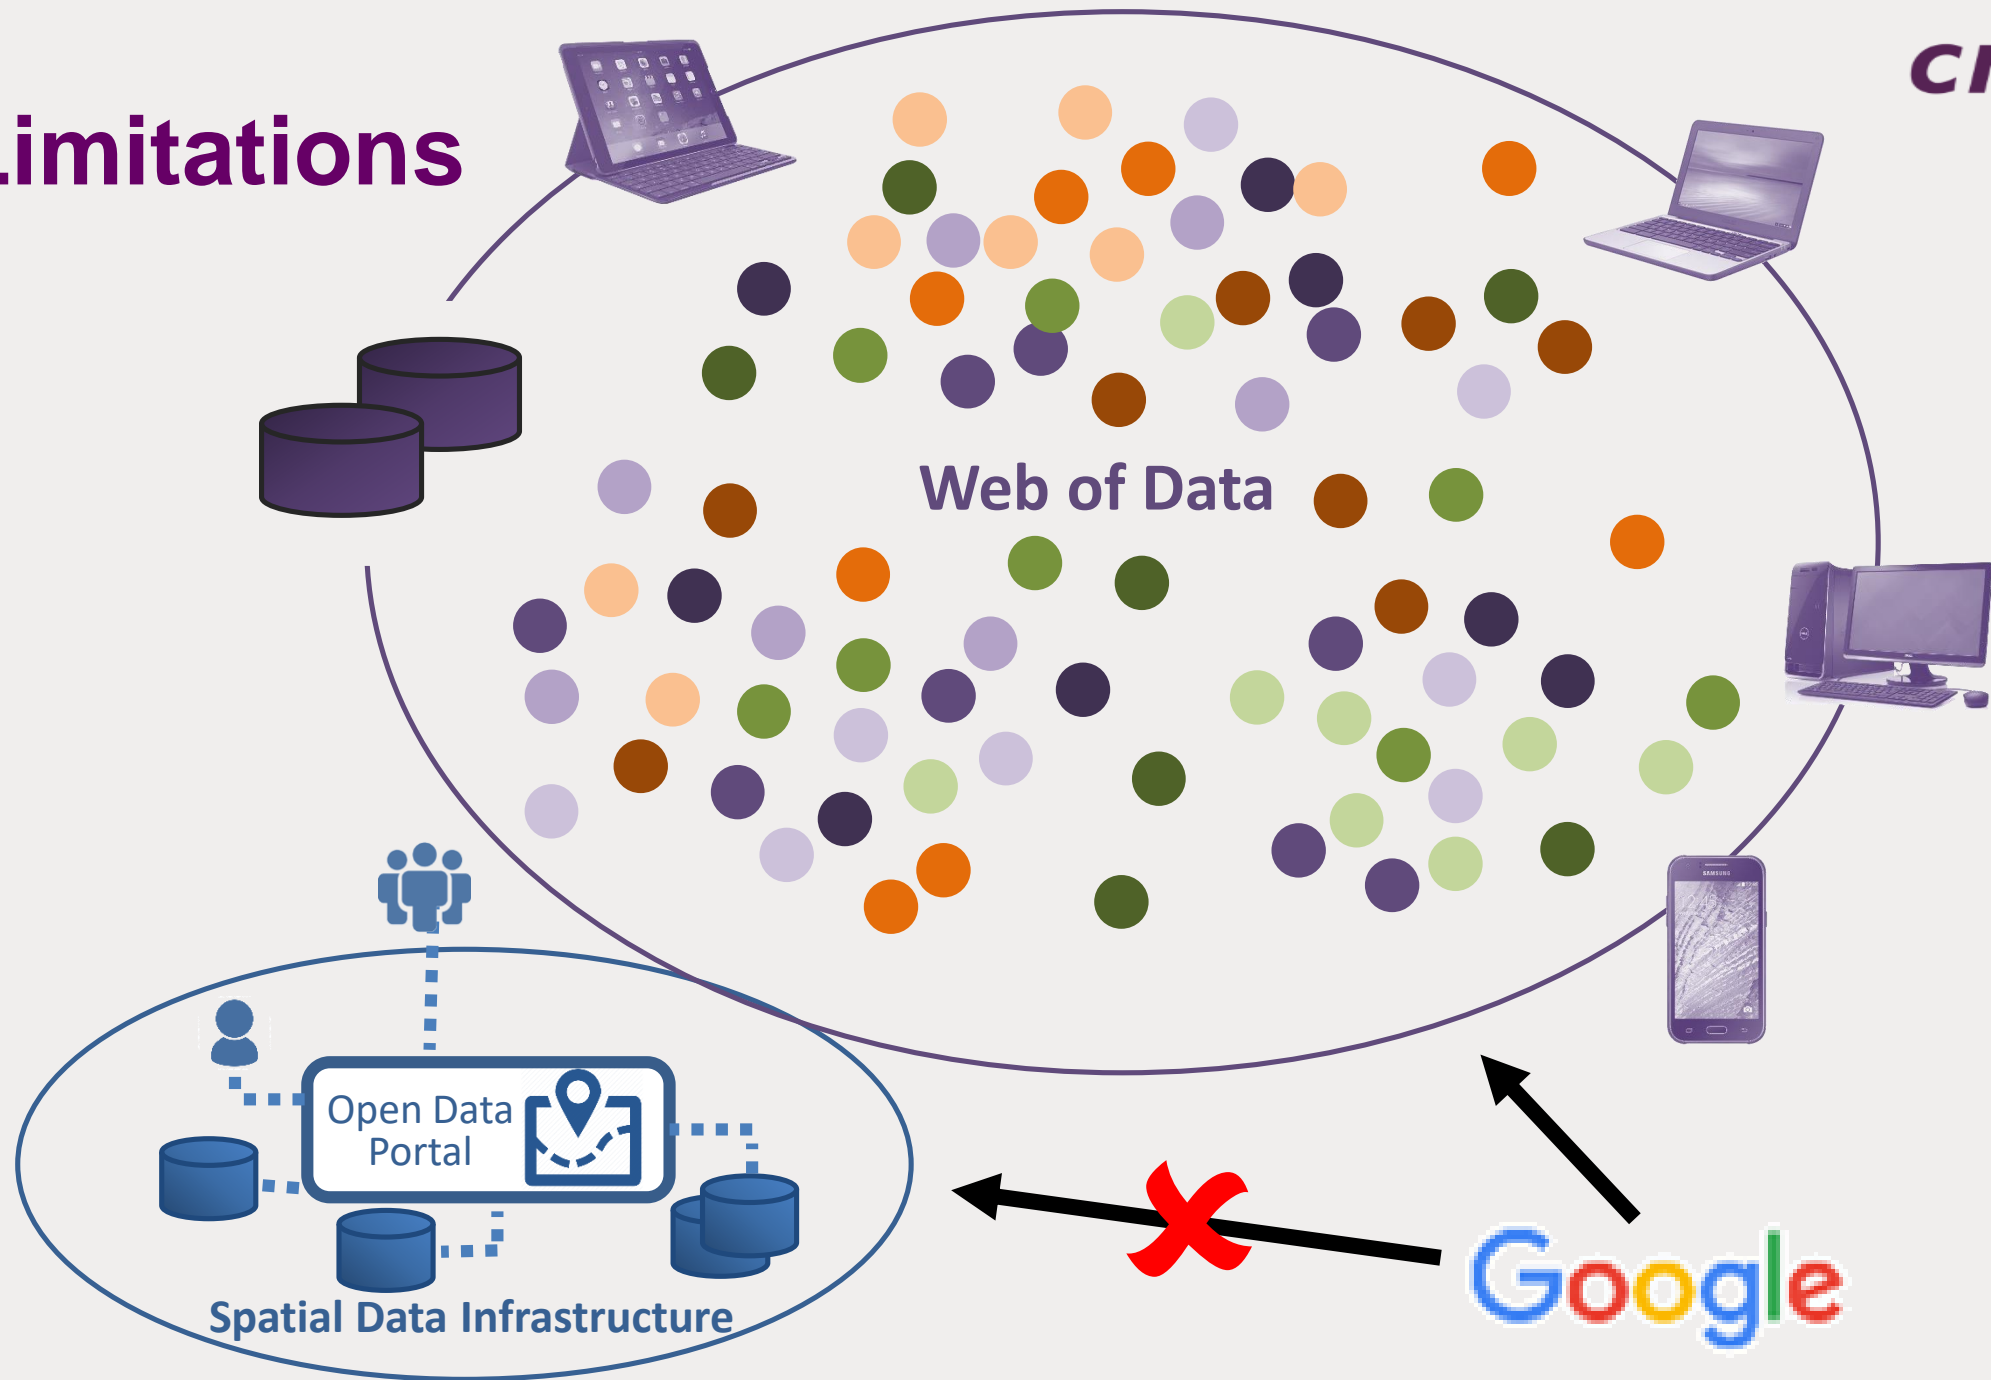

On-Demand Limitations – The SDI

Data not machine-accessible

Designed for Data-IN

Data integration difficult

Limitations

On-Demand Limitations – The Data

The background of the slide is a detailed image of a green printed circuit board (PCB) with various electronic components like resistors, capacitors, and integrated circuits. Overlaid on this is a complex network of white lines and circles, resembling a data network or a map, which connects different points across the board.

Duplicate information

Aggregated data = LCD

Provenance unknown

On-Demand Revolution

The Smart Phone Revolution in connectivity has created an On-demand Economy

“Access is now more important than ownership”
- Futurist Kevin Kelly

Cadastre 2034 - Vision

“A cadastral system that enables people to readily and confidently identify the location and extent of all rights, restrictions and responsibilities related to land and real property.”

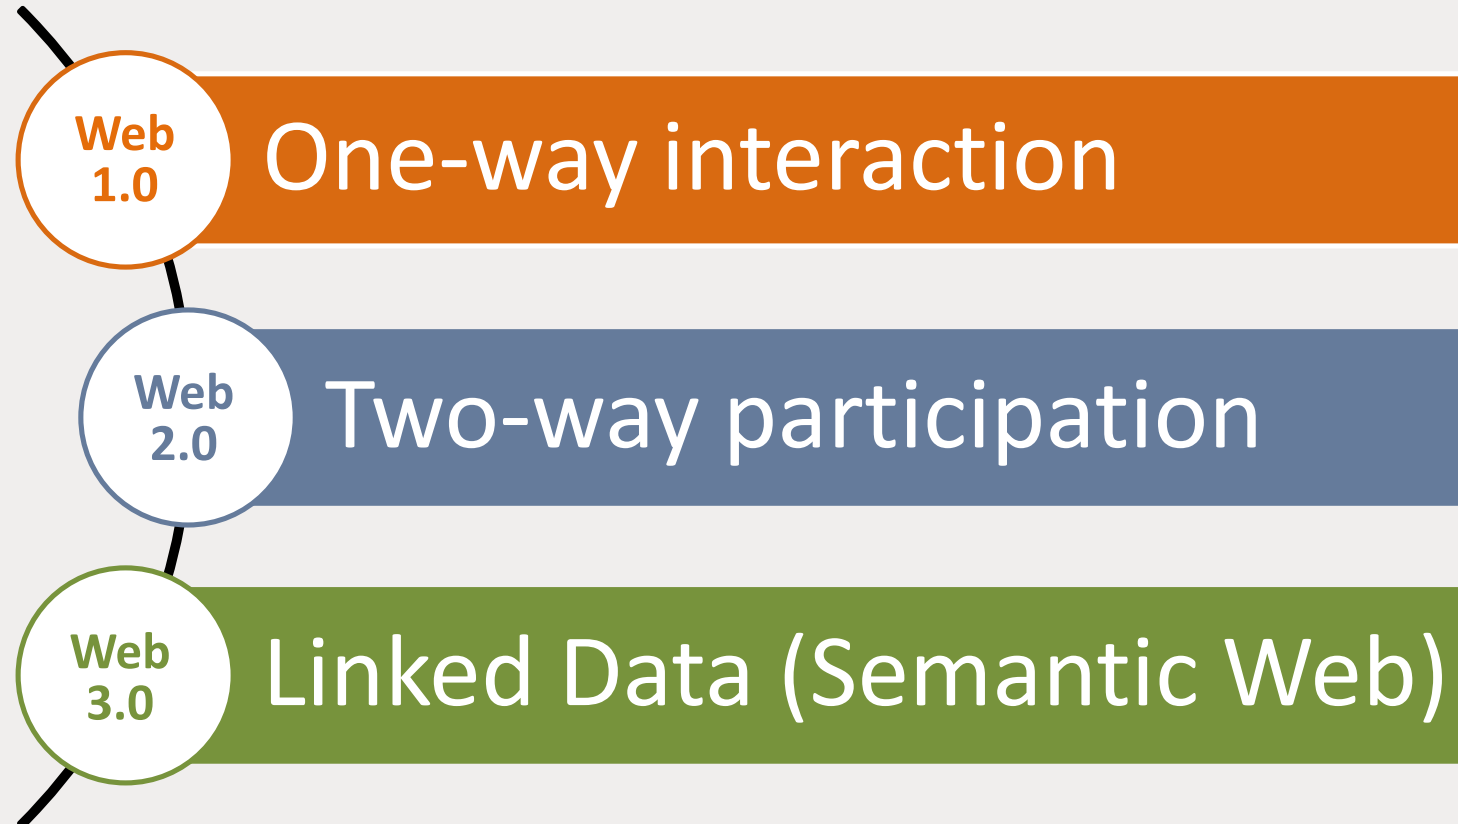

Cadastre 2034

About Knowledge On-demand

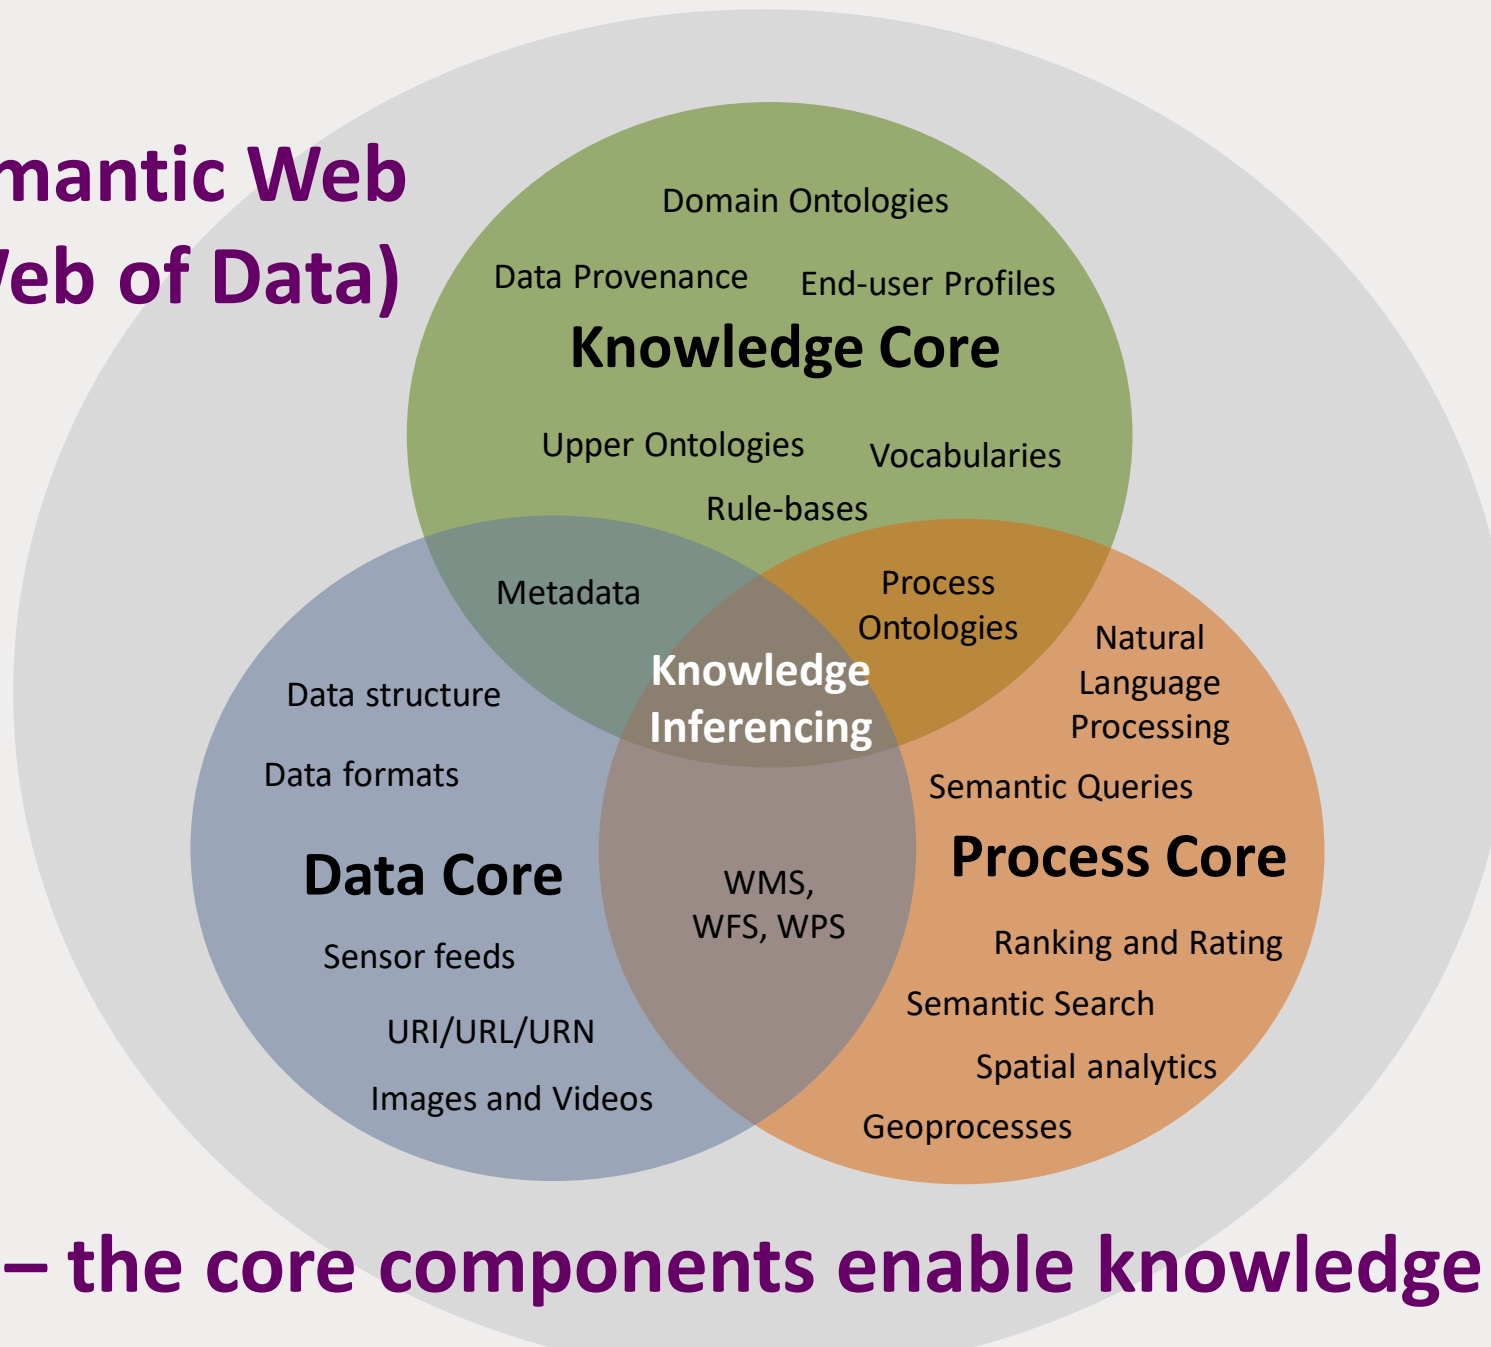

Semantic Web – Making Data Smart

Third stage in the Evolution of the Web

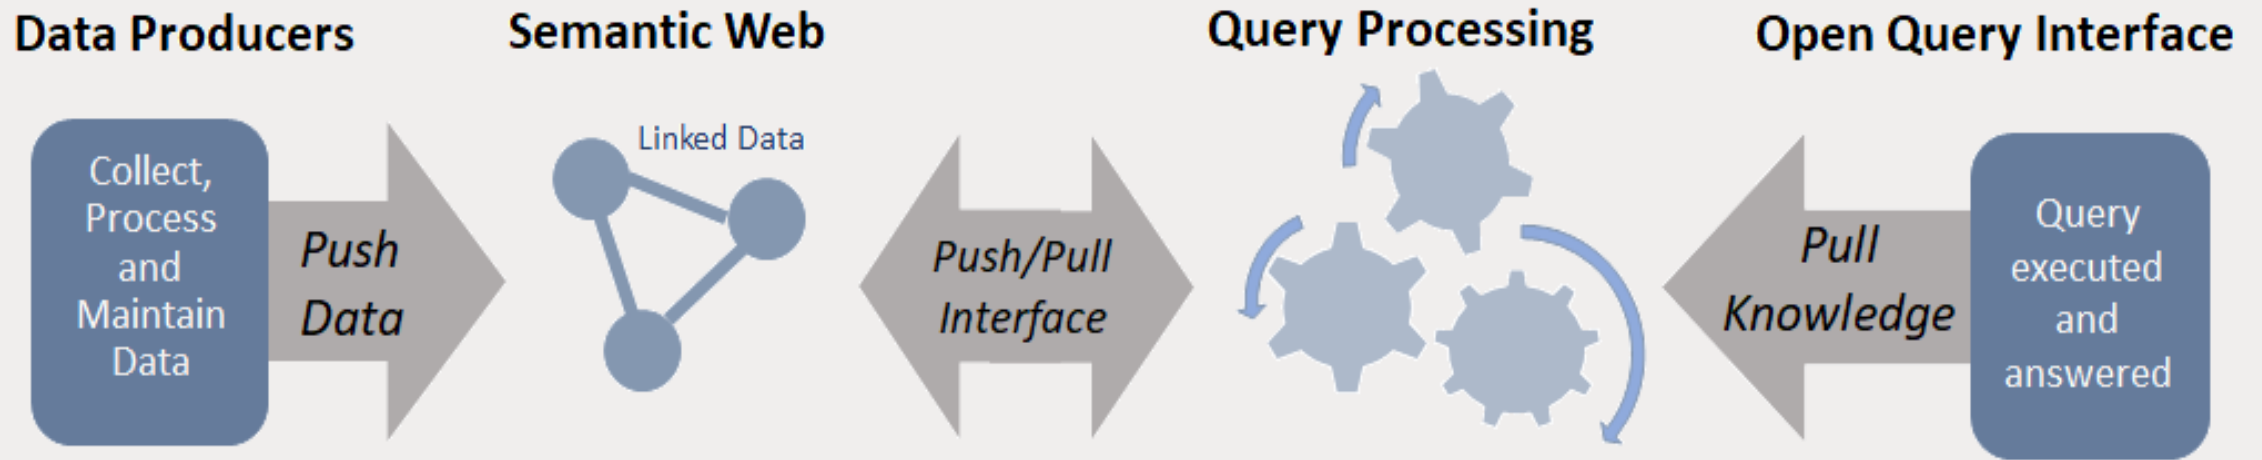

Semantic Web (Web of Data)

Combined – the core components enable knowledge inferencing

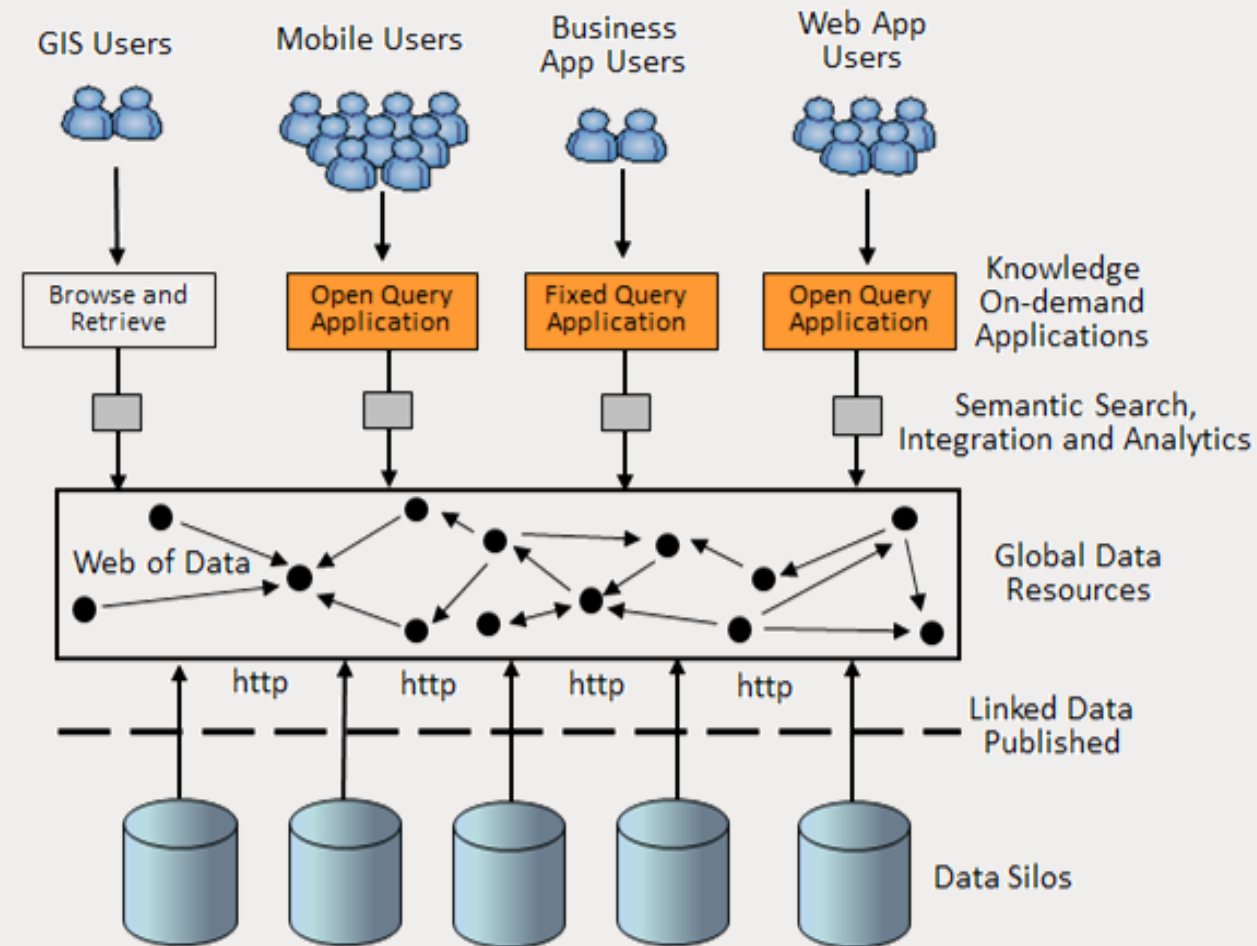

Query Processing

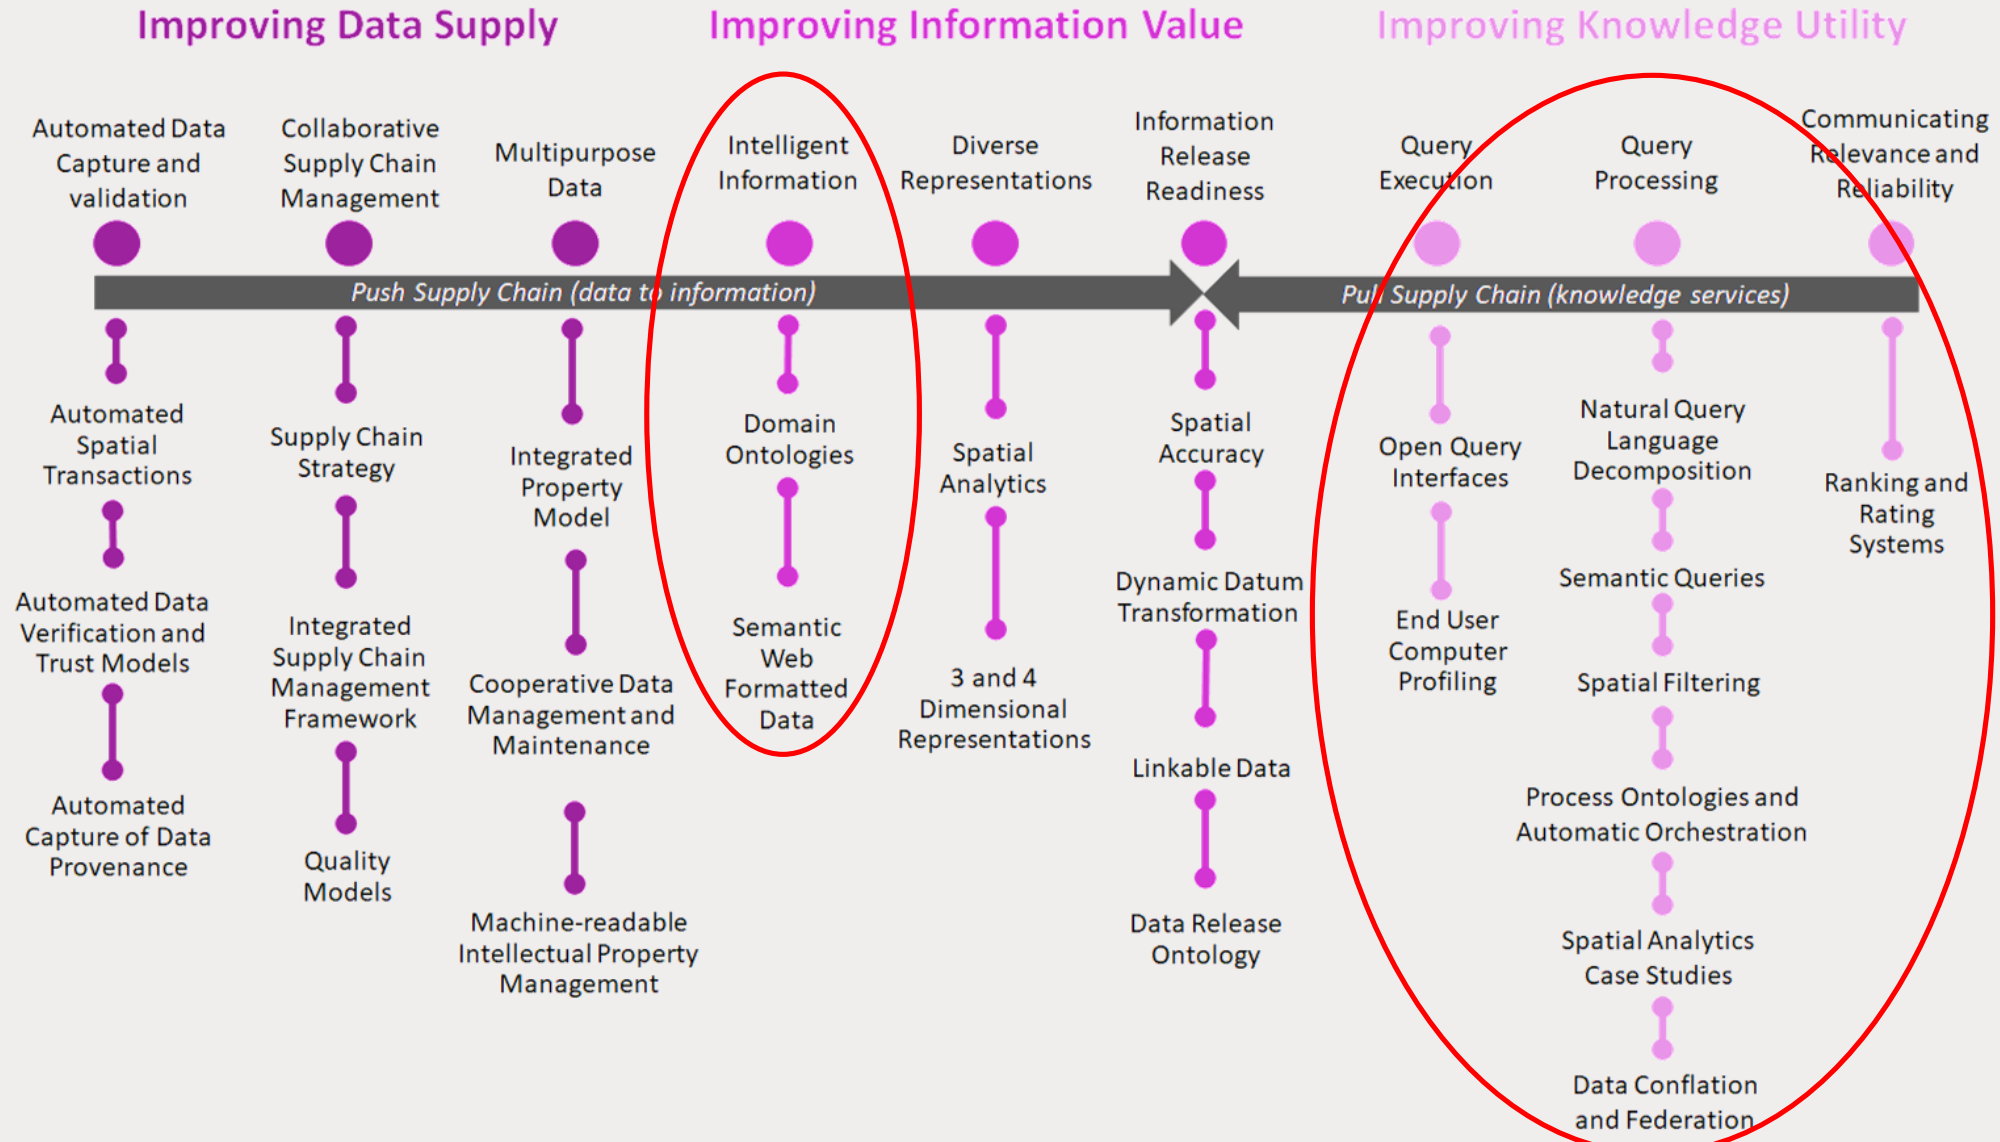

SDI – Data Access Focussed

SKI – Knowledge Discovery Focussed

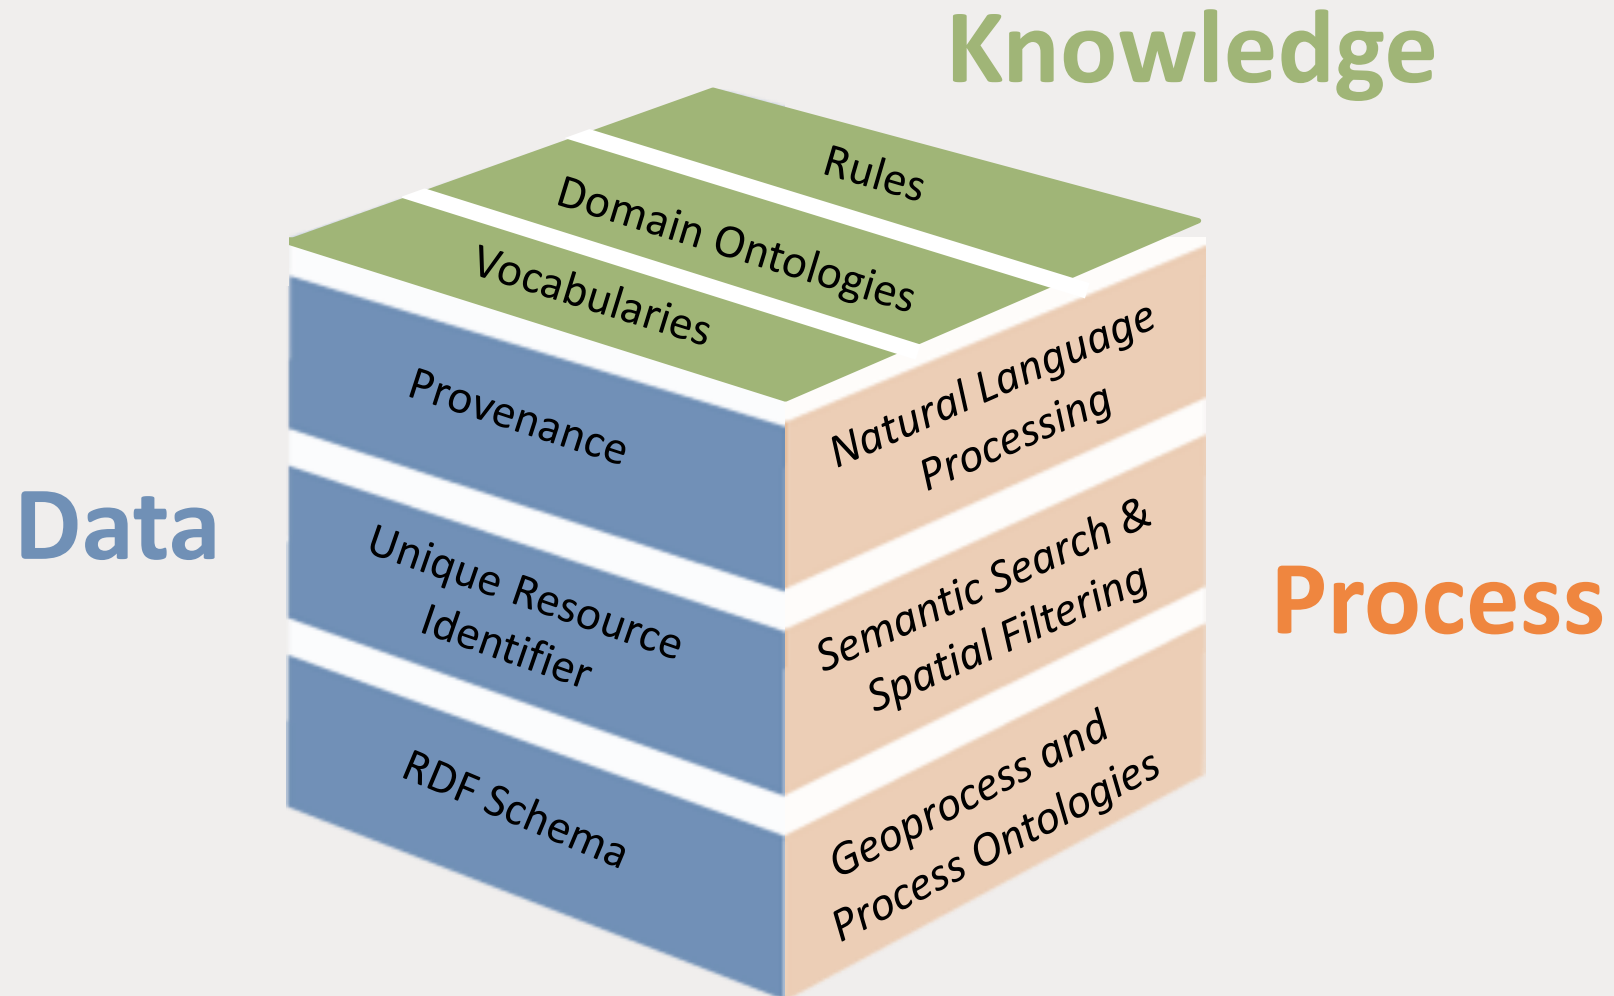

Research Agenda

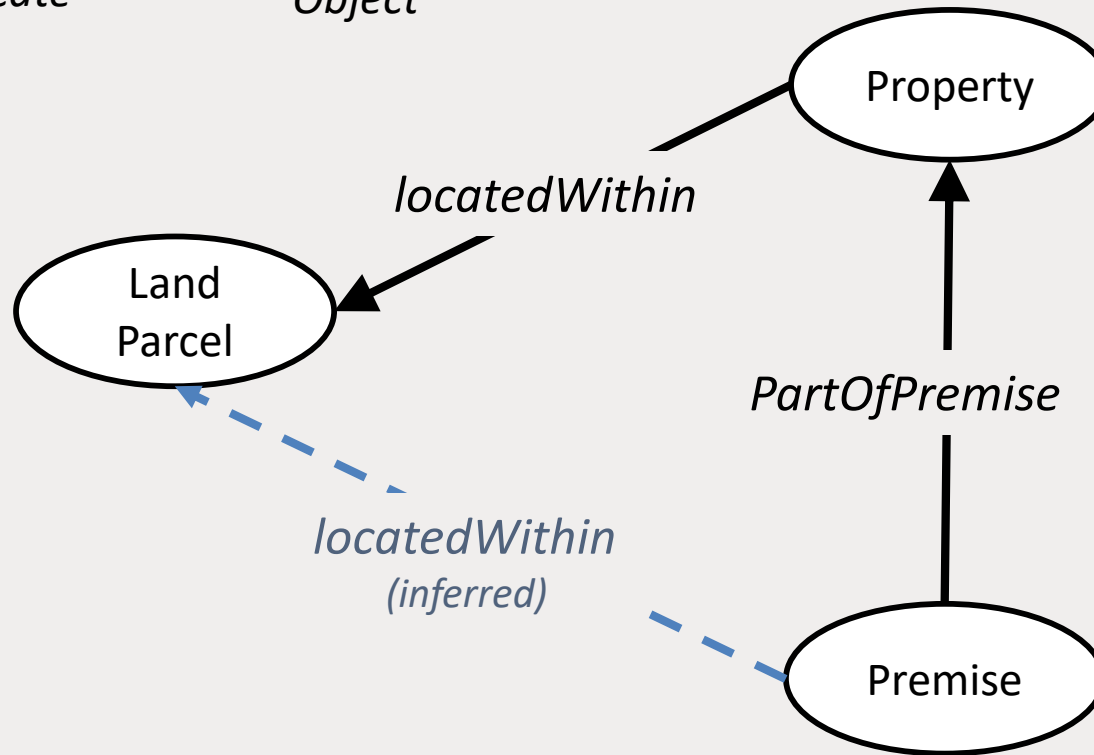

Query Processing

The Building blocks

Data: Building Blocks

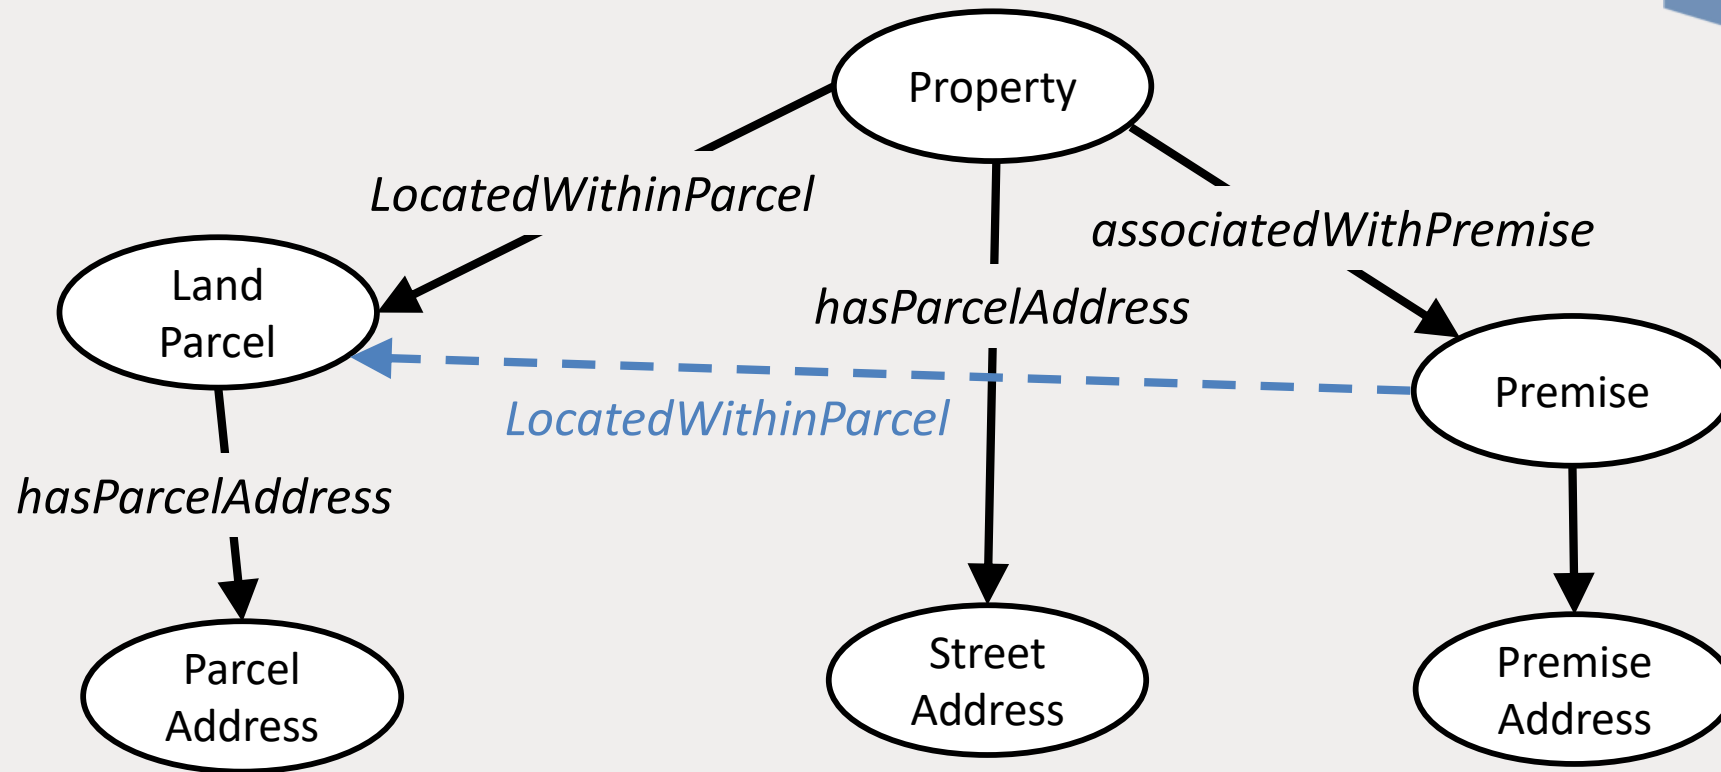

Resource Description Framework

RDF is a standard model for data interchange on the Web.

Data: Building Blocks

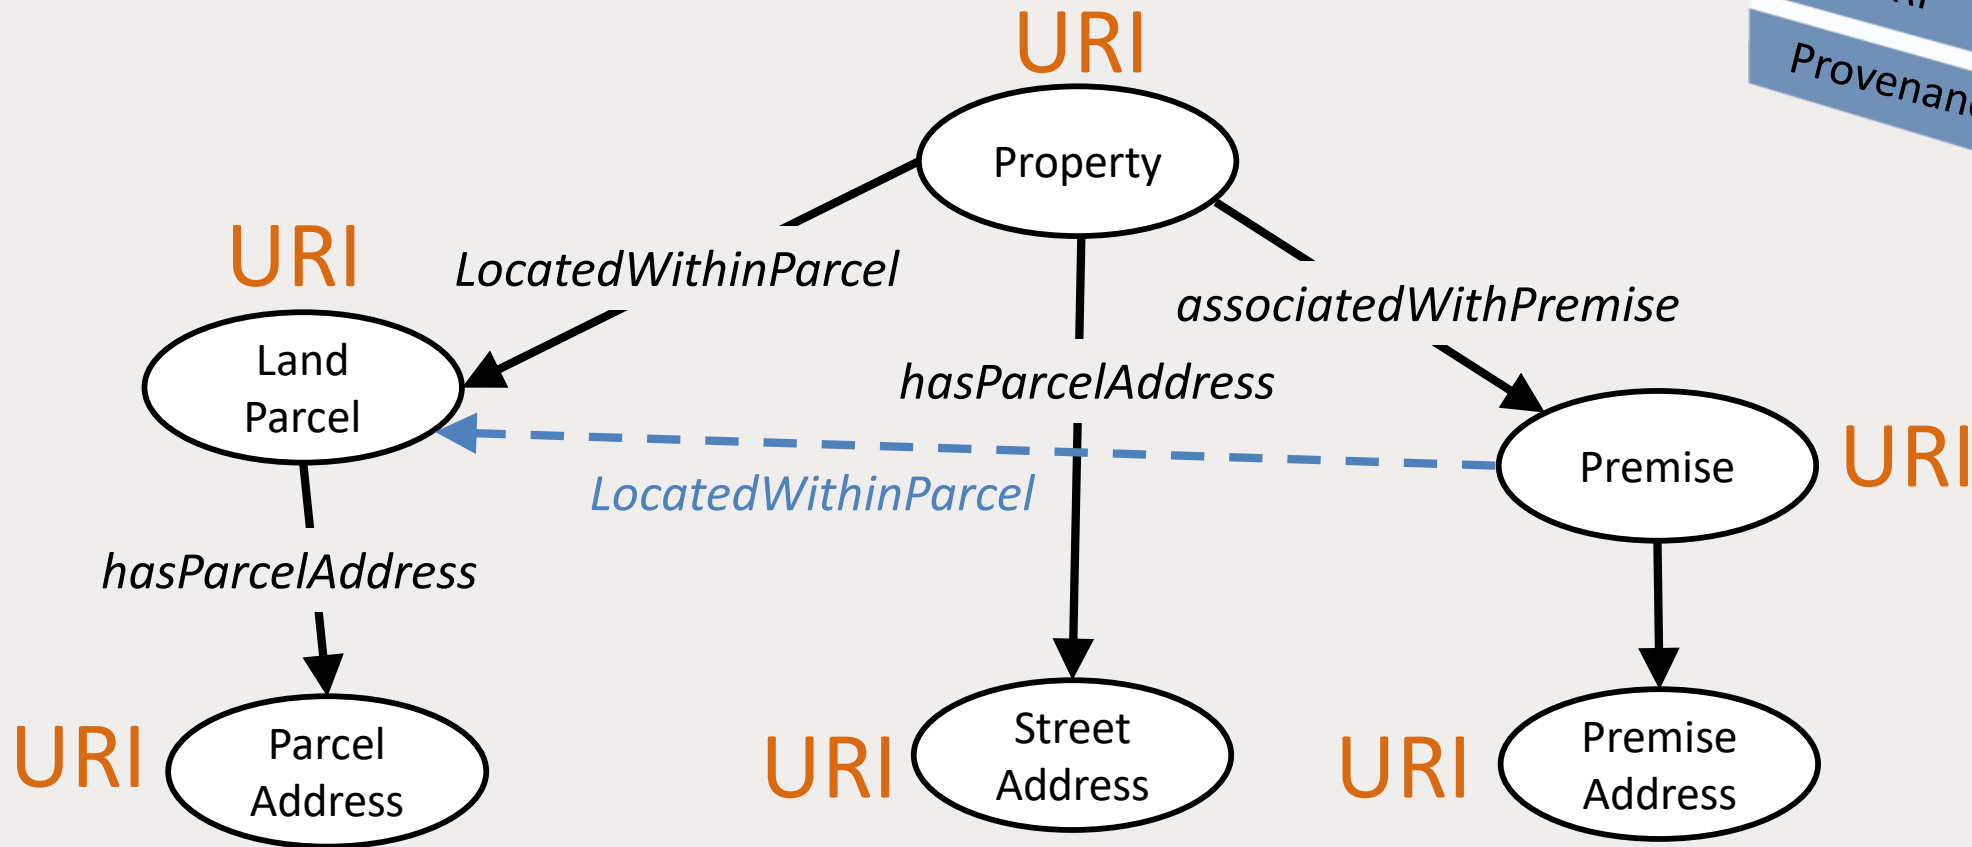

Resource Description Framework

RDF Schema are used to build ontologies

Data: Building Blocks

Resource Description Framework

RDF Schema are used to build ontologies

Data: Building Blocks

Unique Resource Identifier

Shopping Centres

<http://data.gov.au/doc/shoppingcentre>

<http://data.gov.au/doc/shoppingcentre/63540>

URI unambiguously identifies a data resource so it can be found

Data: Building Blocks

Provenance

Information quality changes as data is transferred along the supply chain

QUALITY DIMENSIONS

Completeness (C)
Logical Consistency (LC)

Getting Started

- Importance of Controlled Vocabularies
- Good practice in vocabulary creation
- What is Research Vocabularies Australia
- Using Research Vocabularies Australia
- Research Vocabularies Australia Overview

Creating a Vocabulary

- Research Vocabularies Australia Editor (PoolParty)
- Using the RVA Editor
- Creating a Vocabulary
- Importing a Vocabulary
- Readying Your Vocabulary for Publication

Publishing a Vocabulary

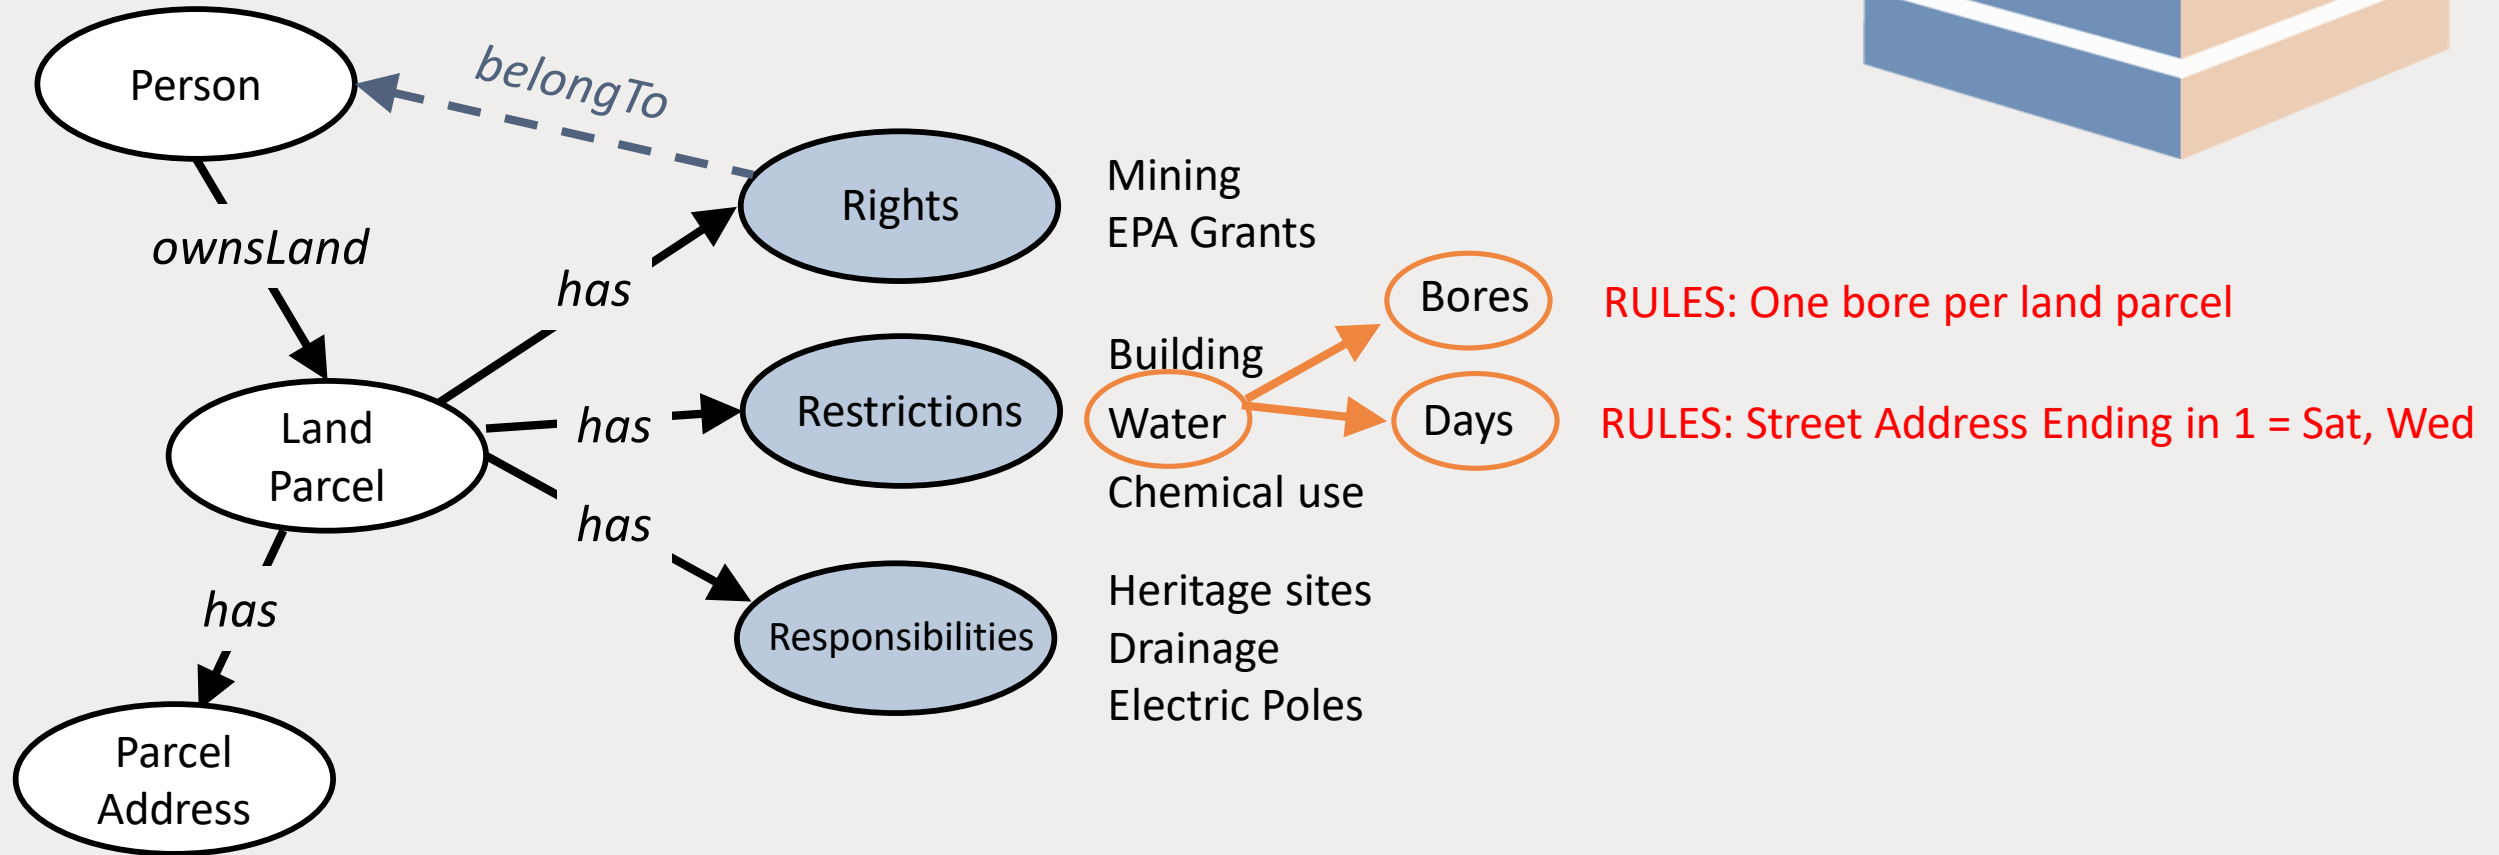

- Research Vocabularies Australia Portal
- Registration and Publishing
 - > **How to Publish**
- Describing Your Vocabulary

<https://documentation.ands.org.au/display/DOC/Research+Vocabularies>

Controlled vocabularies – agreed terms used to support data integration

Knowledge: Building Blocks

Ontologies and Rules – Rights, Restrictions and Responsibilities

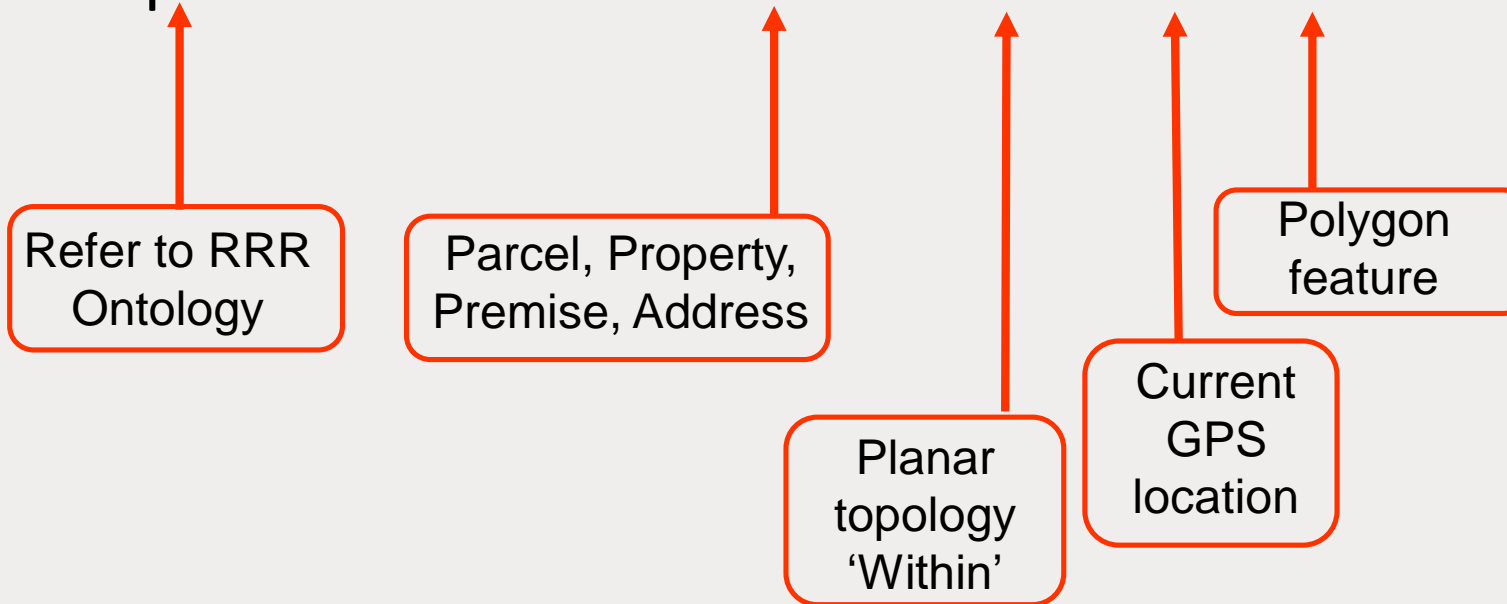

Ontologies– set of concepts in a subject area

Process: Building Blocks

Natural Language Processing

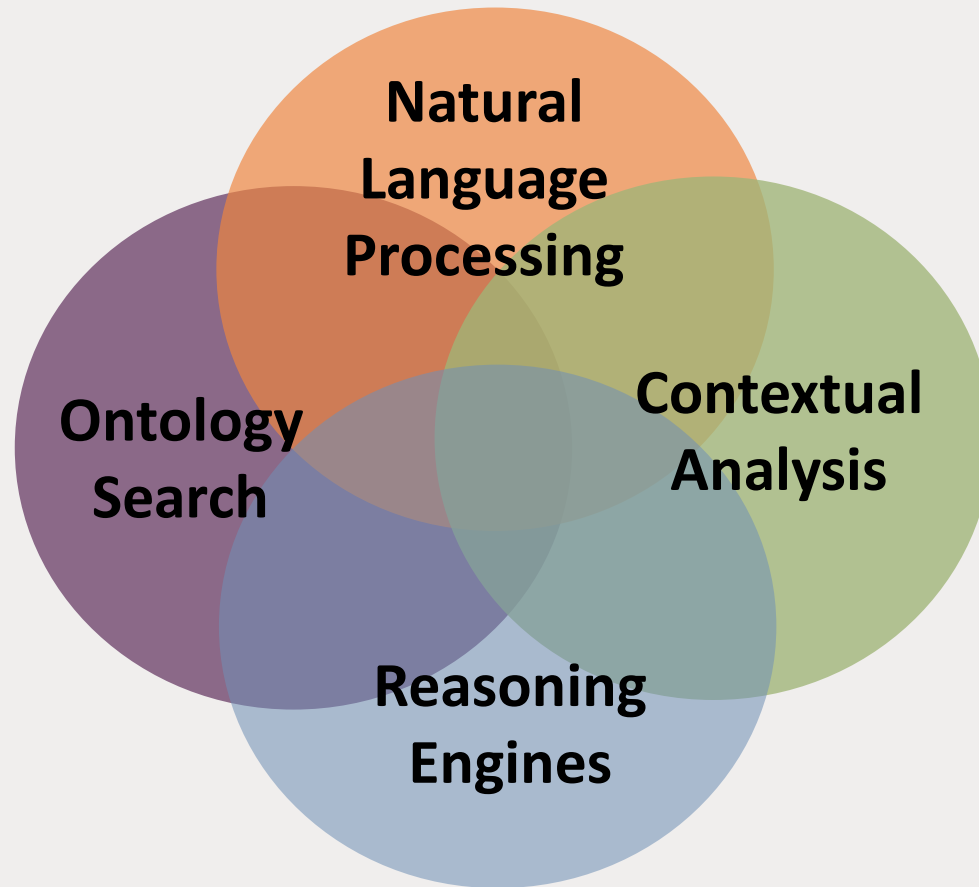

What responsibilities are associated with this land?

NLP – Breaks down the query into manageable units

Knowledge: Building Blocks

Semantic Search and Spatial Filtering

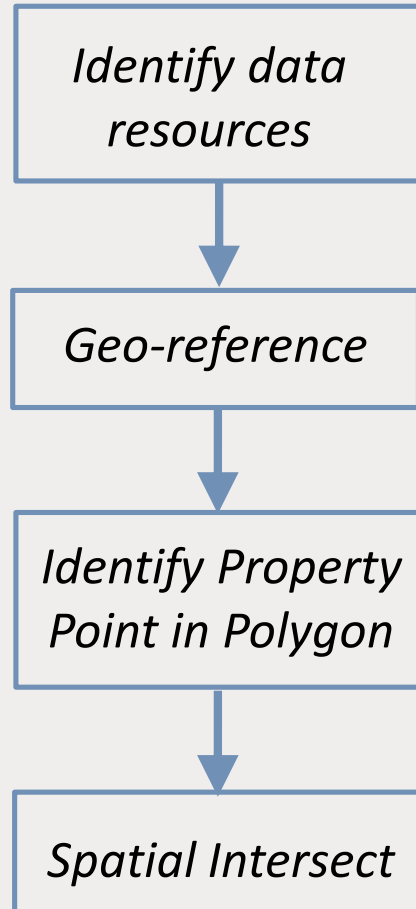

Semantic Search – understand searchers intent using contextual meanings

Spatial Filtering – narrowing the search by location

Process: Building Blocks

Process Ontologies

Shareable

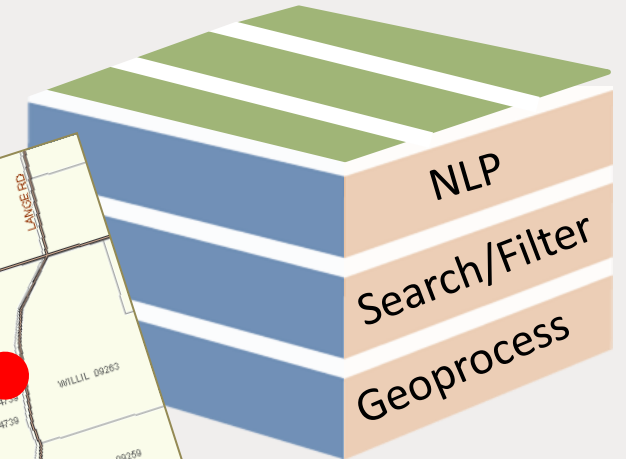

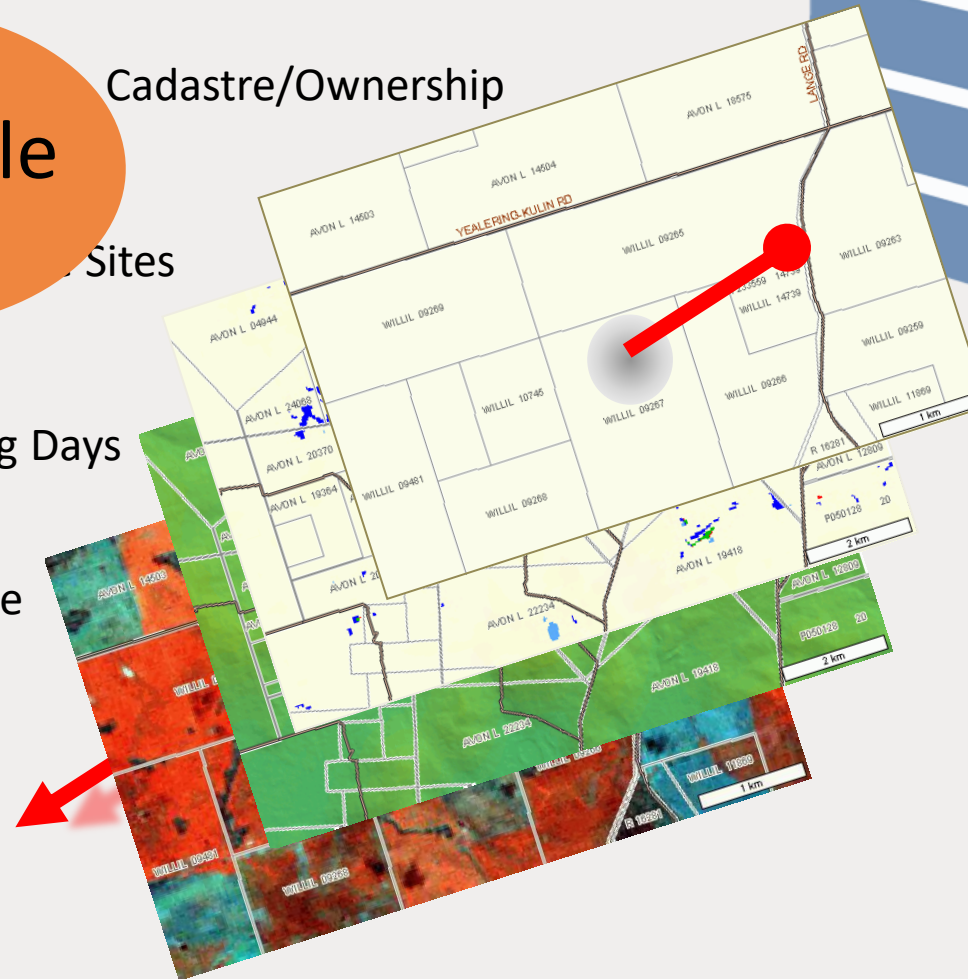

Cadastre/Ownership

Sites

Watering Days

Land Use

Process Ontology – knowledge required to automatically compile, coordinate and run a series of geoprocess

Process: Building Blocks

Geoprocesses

CONFLATION

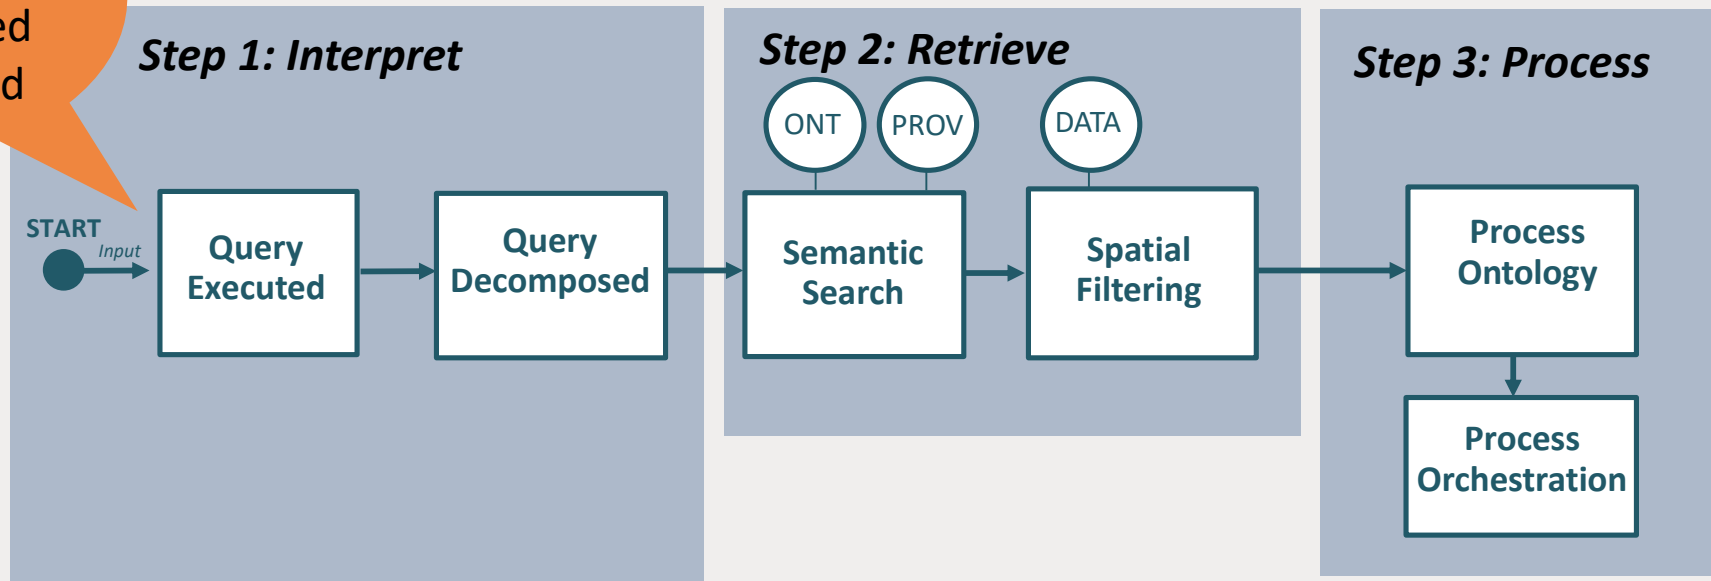

FEDERATION

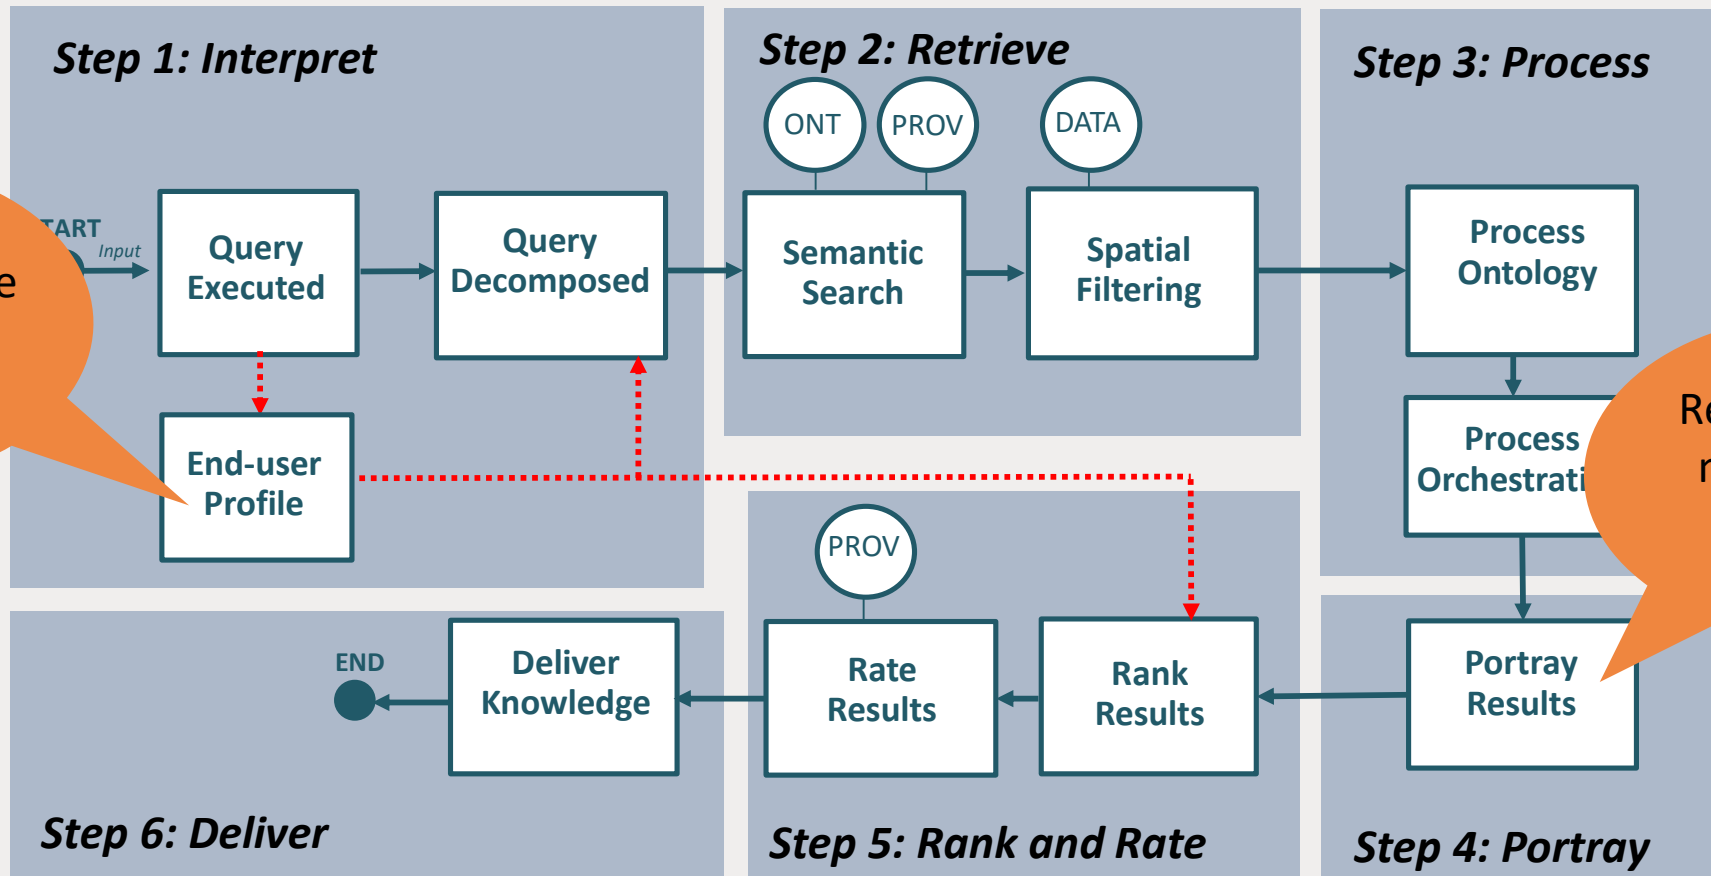

Conflate – single best dataset from multiple sources
Federate – joining adjacent datasets

Steps 1-6 Query Processing

What responsibilities are associated with this land

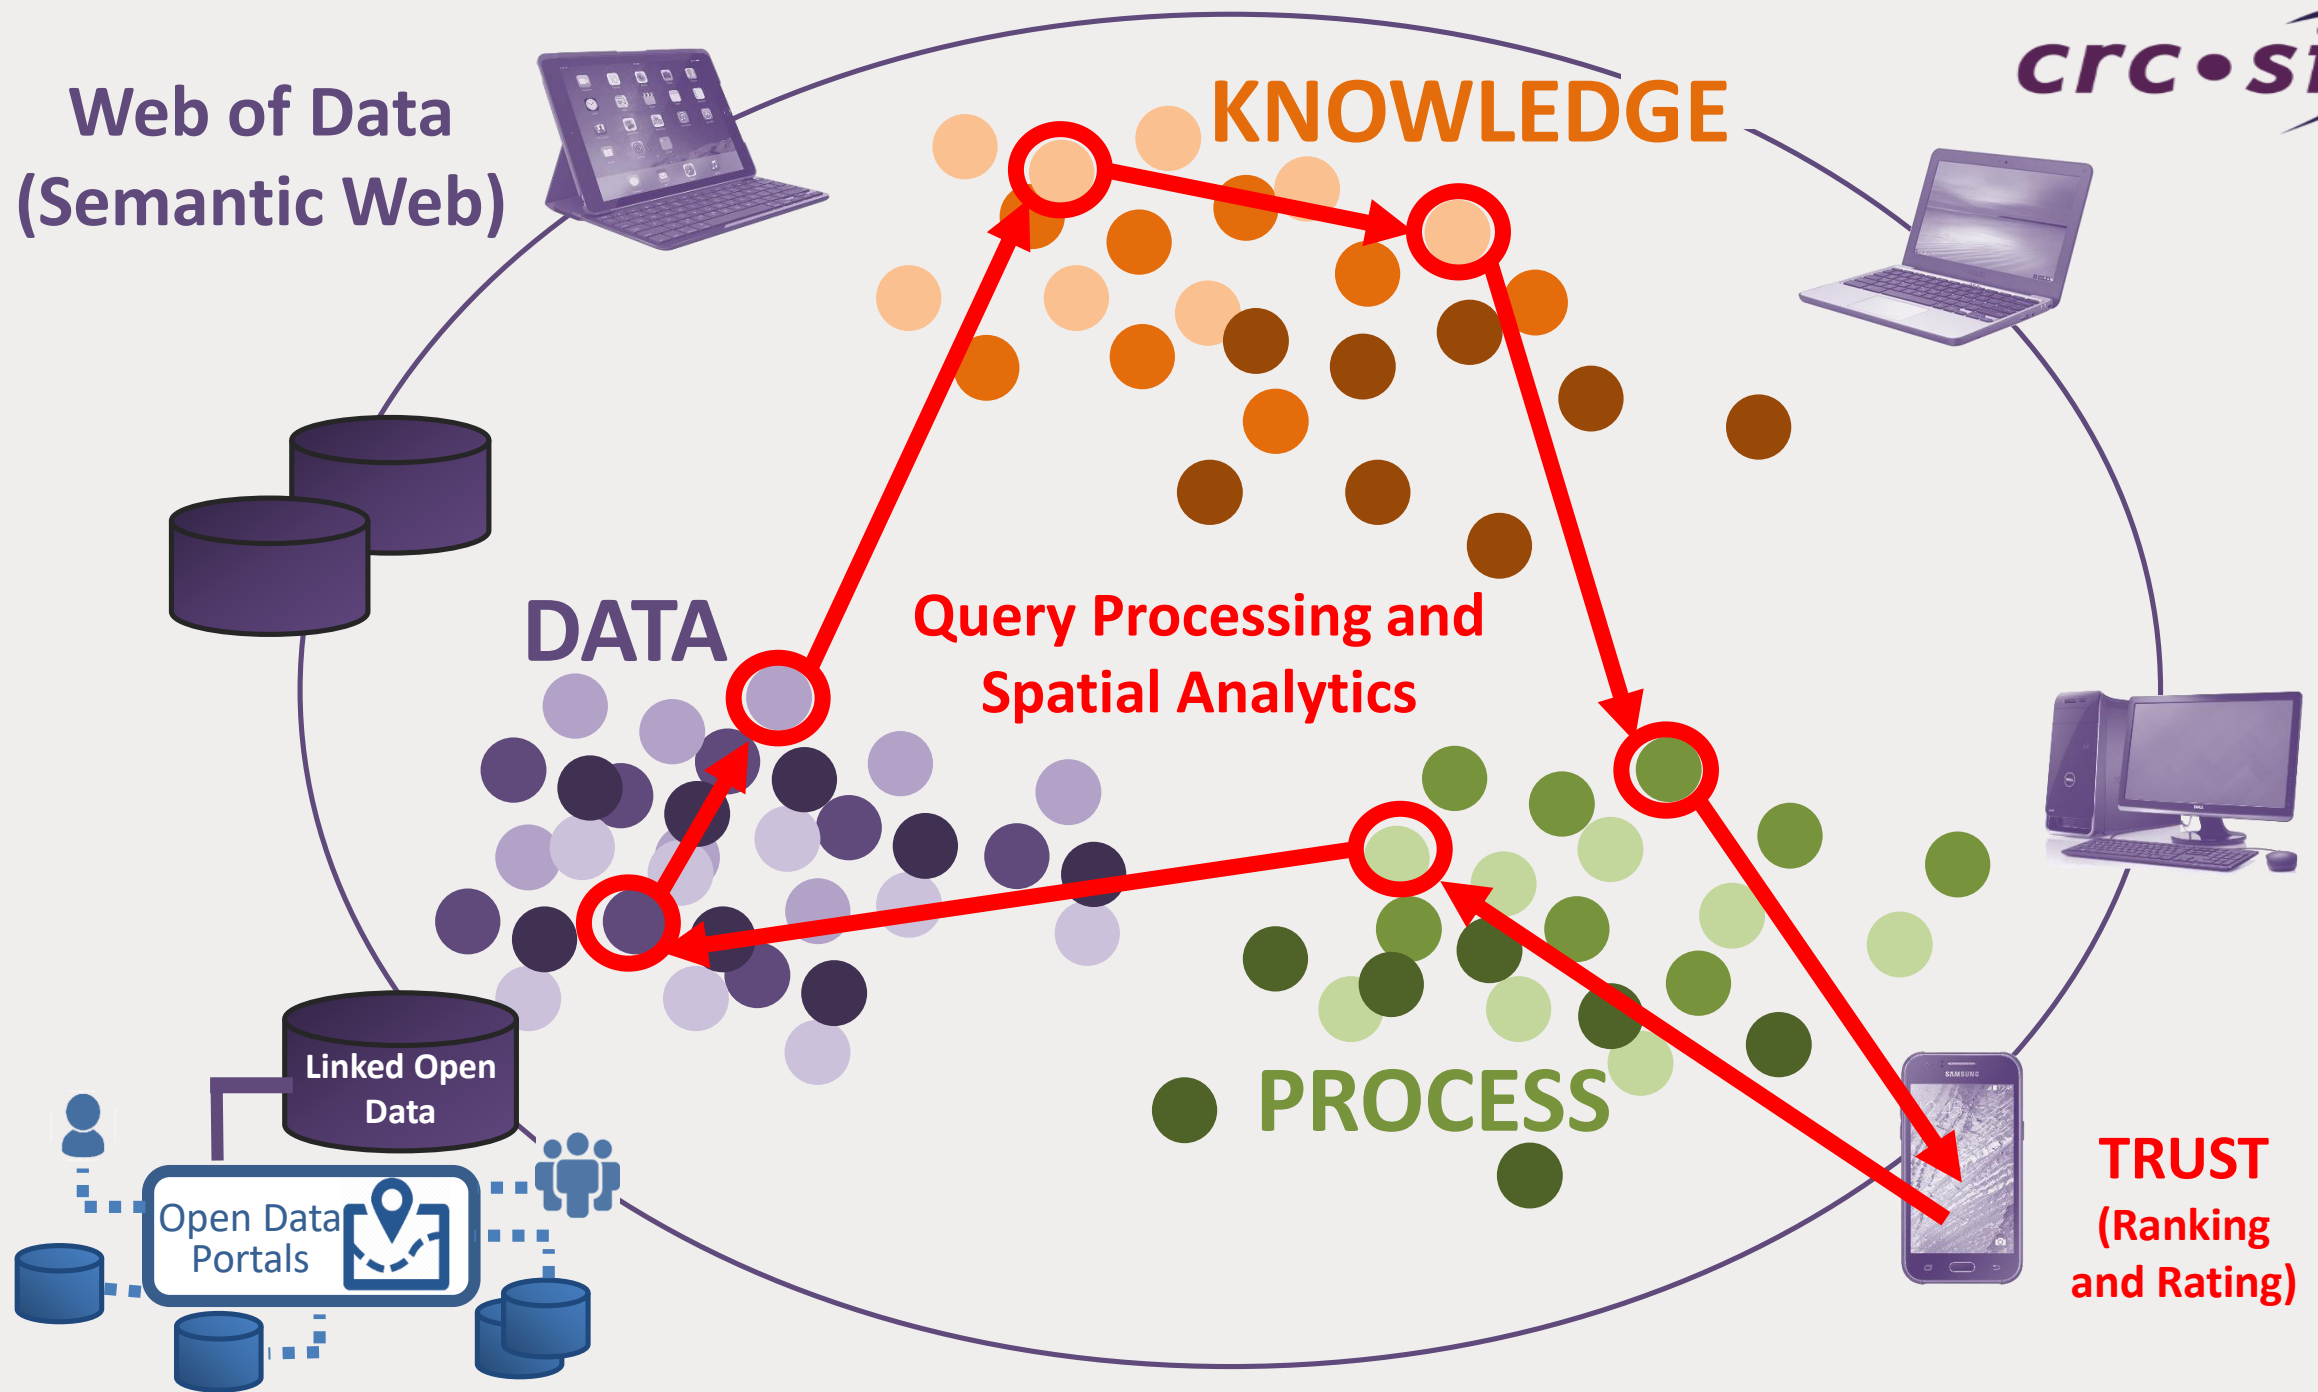

Steps 1-6 Query Processing

Computer Usage
Provides More
Context

Report, graph,
map, image,
video etc

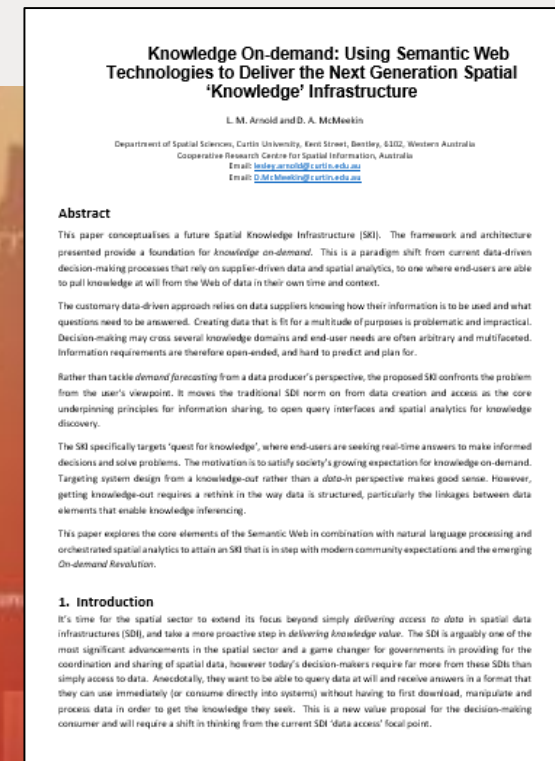

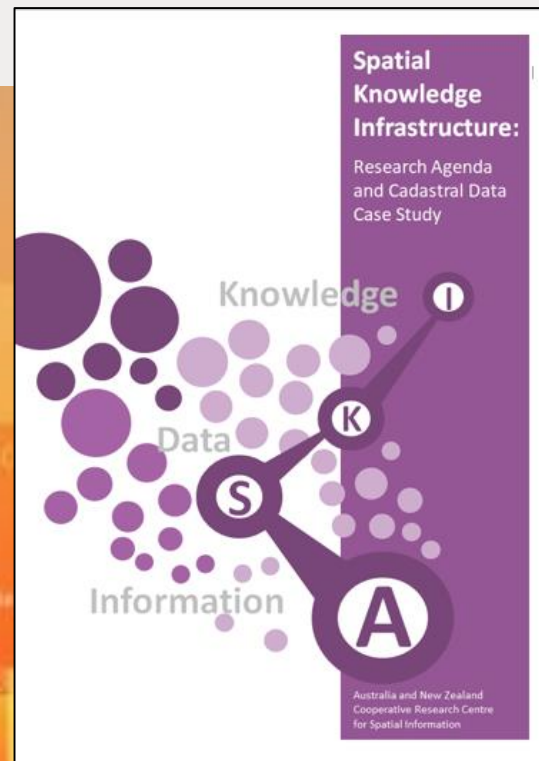

The SKI is not a centralised service or distinct entity.

The SKI embodies the behaviour of resources available in the Web of Data.

Spatial Knowledge Infrastructure
